

25 July 2026 21:17

Step 2: Open start.spring.io(install dependency spring web)-> Open Eclipse IDE and import the file

HelloController.java

Step 4: Then create a .jar file (right click on the project) on eclipse ide

- Step 5: The key that you have downloaded from EC2, the .jar file must be in the same destination/same file path

Info

Connect to an instance using the browser-based client.

i-0fac6a7a11f4d2939 (SpringWeb-Deploy-Ec2)

VPC ID

Security groups

[sg-0955559a93655a066 \(launch-wizard-3\)](#)

IAM role

- EC2 Instance Connect
- SSM Session Manager
- **SSH client**
- EC2 serial console

Instance ID

[i-0fac6a7a11f4d2939](#) (SpringWeb-Deploy-Ec2)

1. Open an SSH client.
2. Locate your private key file. The key used to launch this instance is `ec2-springkey.pem`.
3. Run this command, if necessary, to ensure your key is not publicly viewable.
`chmod 400 "ec2-springkey.pem"`
4. Connect to your instance using its Public DNS:
`ec2-3-110-28-139.ap-south-1.compute.amazonaws.com`

Example:

```
ssh -i "ec2-springkey.pem" ec2-user@ec2-3-110-28-139.ap-south-1.compute.amazonaws.com
```

Note: In most cases, the guessed username is correct. However, read your AMI usage instructions to check if the AMI owner has changed the default AMI username.

From <<https://ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#ConnectToInstance:instanceId=i-0fac6a7a11f4d2939>>

Step 7: Open CMD-> To connect the key first we use : `ssh -i "ec2-springkey.pem" ec2-user@3.110.28.139`
code: `ssh -i <key_name> ec2-user@<IP_address_name>`

Step 8: To connect SpringBoot project to EC2

```
scp -i ".\ec2-springkey.pem" .\target\SpringAWSAppDep-0.0.1-SNAPSHOT.jar ec2-user@ec2-3-110-28-139.ap-south-1.compute.amazonaws.com:/home/ec2-user/
```

Step 9: Click yes and all the .jar content gets transferred into the Ec2 and a connection establishes

Step 10: Use 2-CMDs and then check whether the .jar is appearing in the /hello/ec2-user file path

Step 11: Download the java file if not exist

```
sudo yum install java-17-amazon-corretto -y
```

Step 12: Use this command

```
java -jar SpringAWSAppDep-0.0.1-SNAPSHOT.jar
```

is used to **start (run)** your Spring Boot application.

Here's what each part means:

- **java** → Starts the Java Virtual Machine (JVM).
- **-jar** → Tells Java to execute a JAR (Java Archive) file.
- **SpringAWSAppDep-0.0.1-SNAPSHOT.jar** → Your compiled Spring Boot application.

:: Spring Boot :: (v4.1.0)

EC2 > Security Groups > sg-0955559a93655a066 > Edit inbound rules

Edit inbound rules Info

Inbound rules control the incoming traffic that's allowed to reach the instance.

Inbound rules Info

Security group rule ID	Type Info	Protocol Info	Port range Info	Source Info	Description - optional Info	
sgr-06482973712b451ac	SSH	TCP	22	Custom	0.0.0.0/0	Delete
sgr-07cdb9084d9c6a88c	Custom TCP	TCP	7890	Custom	0.0.0.0/0	Delete
sgr-07d3a77c8ac64dc7a	HTTP	TCP	80	Custom	0.0.0.0/0	Delete

Add rule

Rules with source of 0.0.0.0/0 or ::/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

Cancel Preview changes Save rules

As u can see that the port that we gave 7890/any if u named gets noted there -> eclipse actually runs on 7890 port that's why we have to save it like this else wont run if u open the postman to check whether it is running

Step 14: <http://ec2-3-110-28-139.ap-south-1.compute.amazonaws.com:7890/hello>
finally it runs)

CMD Shell 1: do this after you actually run the command to connect springboot to ec2 and then check the ls command to check whether the .jar is saved or not and then run the java application to run the springboot application and check the url if working or not
